Design Your Own Simple 3D Objects in Augmented Reality

Spring 2023

Our mobile devices are so powerful, they could place a digital object in a classroom. We will design objects in an online CAD app (Sketchup) from scratch. Next, we upload it to a web service (Sketchfab) and will watch augmented reality through our mobile devices.

This event is sponsored by the OFDAS Center for Teaching Excellence (CTE).

Tuesday, February 7
12:00 pm–1:15 pm
Kuykendall 106 Events Room

Participants in the workshop will:

- experience augmented objects in a classroom
- be introduced to online CAD app (Sketchup)
- design simple objects on their own devices

Come and join this workshop! BYOD (bring your own device) and be a designer for 3D objects.

PRESENTER

Prof. Florian Geier, BEd
